

Stainless Steel Operating Table Tops

CHOOSE AN OPERATING TABLE TOP ...

Flat Operating Table Top

Our Flat Operating Table Top is simply the strongest operating table top available today. It is ideal for most procedures.

The uniquely designed rigid stainless steel top has a slightly raised center to direct fluids to a trough at the outer edge of the table top surface. The trough then channels fluids to the drain/collection hole at one end to allow fluids to drain away from your operating site.

For comfort and safety, all our Flat Operating Table Tops have smooth, rounded corners and a satin finish that is easy on the eyes even with bright operating lighting. Stainless steel top is flanged down and hemmed to eliminate any sharp edges.

Our Operating Table Tops also feature our Access-A-Rail Tie-down System to help you keep animals safely positioned during surgical procedures.
