Complete Maintenance Experts

Regular servicing keeps veterinary equipment in tip-top condition, for first class care and total peace of mind.

Anesthesia System

- Multi point system inspection
- Vaporizer calibration check (required every 2 years, recommended annually)
- System leak tests
- Cleaning

Waste Gas Evacuation Systems

- Verify positive gas evacuation flow at each anesthesia delivery location

Dental Delivery System

- Compressor Oil Change
- Replace inlet air filter if applicable
- Pressure settings checked and adjusted
- Safety pressure valve check
- Drain moisture from air pressure tank
- Hand pieces, function tested, water flow verified where applicable

Steam Sterilizers

- Replace door gasket
- Documented multi point condition inspection
- Cleaning cycle
- Test run with verification of temperature and pressure

Microscopes

- Replace light bulb (if halogen)
- Clean Exterior and Optics
- Lubricate bearings and slides as needed
- Reset Kohler Alignment if applicable
- Test to confirm proper functionality

Oxygen Concentrator

- Supera units (we supply filters)
- Other brands (customer to order filters elsewhere)
- Install new air filters
- Test output supply for purity and volume

Centrifuges

- Clean and check condition of lid lock, rotor and tube carriers
- Certify RPM and timer

Whole Body X-ray Table System (yearly check)

- Collimator bulb replaced (if Halogen)
- Collimator alignment checked
- Clean and relubricate candle sticks (high tension lead connectors)
- Test kVp, Timer and mA outputs
- (5th year) Complete SPM Inspection and Document Submittal (SK and MB) or Inspection Readiness Test (AB)

Whole Body CR

- Cover off internal inspection
- Test scans for normal function
- Roller cleaning and cooling fan cleaning
- Reassemble
- Test Images of certified x-ray phantom (comparison to previous test images for consistency, noise, artifacts etc..)
- Computer display light output verified with inspection light meter

Dental X-ray Generator

- Inspection for damaged covers, external damage, positioning arm wear/tear
- Check positioning arm for proper positioning/drift control. Adjust as needed
- Check control panel for damage and normal functionality
- Test outputs (kVp, mA and timer)
- (5th year) Complete SPM Inspection and Document Submittal (SK and MB) or Inspection Readiness Test (AB)

Ultrasounds

- Clean computer cooling system
- Check electrical safety
- Check battery condition
- Check image quality and measurement function using phantom

Whole Body DR

- Test Images of certified x-ray phantom (comparison to previous test images for consistency, noise, artifacts etc..)
- Computer display light output verified with inspection light meter
